**A GRUESOME DANGER SIGNAL.** The illustration shown here is in no way connected with pirates, for instead of participating in life-taking, it is a device by means of which lives are saved. Should there be a subsidence of land over a mine, it is necessary that people should not approach too near the dangerous areas. Therefore, boards similar to the illustration are erected close to the spot, and they stand a silent warning against the danger. Though it cannot be denied that these boards serve their purpose well, perhaps a less gruesome design could have been adopted.
